

Top companies were recognised and rewarded for their efforts for greening their supply chains at the second annual Green Supply Chain Awards, which took place on 19 August 2010 at the offices of the Consumer Goods Council of South Africa (CGCSA) in Randburg.

MAGNET

Winner in the Green Supply Chain Awards 2010

BEST PRODUCT AWARD

BEST PRODUCT AWARDS

The "Best Product Between R 1 and R 10 million" was awarded to Magnet for its recently completed energy efficient lighting project for Transnet Rail Engineering (TRE) in the Durban Harbour Area. Through the design and installation of a new energy efficient lighting system, energy consumption at the warehouse facility has been reduced by approximately 60%.

Magnet's demand side management (DSM) programmes involved replacement, retrofitting and relamping, to ensure optimum energy efficiency in every application. TRE's warehouse, where the repair wagons, wheels, engines and motors take place, consist of over 60 bays that were previously illuminated by outdated 400w high-bay-type light fittings. Over 2500 units have now been replaced with energy efficient fluorescent high-bay fittings and 4 000 open channels and dustproof fittings have been replaced with more efficient lower wattage units.
